## **“Quality control in qPCR”**

**Mgr. David Švec, Ph.D.**

Institute of Biotechnology AS CR

**Date: May 10, 2016**

**Time: 9:30**

**Place: CEITEC MU (Room No. 211), Kamenice 753/5 (pav. A35)**

### **Abstract:**

When working with qPCR it is very important to have control over all the different steps that are included in the process. It reaches from the experimental design all the way to the data analysis. Leaving out a part of the process from your quality control may result in erroneous conclusions and decisions. To help researchers and reviewers to have a better overview of the different parts that needs to be taken into consideration, the MIQE guidelines have been published.
